User Stories

Given I am logged in
And a friend is shown on the map
When I click the friend's name
Then a text box pops up
When I type a message
Then the send button is enabled
When I click send
Then the message is sent to the friend

As a user, I want to know the professor's teaching style by searching his/her name so that I can decide whether to take his/her class.
Given the intro Login page
Then I login the app with my ucsd amcs account
Given I am logged in
When I click the search button
Then a search box pops us
When I type the professor's name in the box
And I click search
Then the relative ratings and comments about that searched professor are shown on the screen
1.search by class: ordered by the popularity of the likes
2. search by professor: ordered by the number of the courses taught by professor.

Search: default search by Professor name, but what about additional filter search (position of the filter search)
search result: should the layout be ordered by the classes number that one has taught

As a user, I want to like a comment and look at the commonly agreed comments first so that I can share my opinion and know others' opinions.

Given I am logged in
And there are comments on a professor
I can see comments sorted by number of likes
For a particular comment
When I click the like button

Then the likes for that comment will update
Then the comments in the page will update base on amount of likes on individual comment/rating

-cancel like by click again

As a user, I want to have the right to add new professors so that I can still fill in ratings even thought that professor is orginially not on the list.

Given I am logged on
Then I searched a professor,
And the professor is not on the list,
Then I click on the "Add Professor" button
Then a text box should appear to input the professor name
When I input the professor name and press ok, then send the comment
Then others should be able to search for the professor

As a user, I want to edit my comment so that I can add new things to it.

Given I am logged
When I click Edit(button) on a comment that I wrote
Then the comment box becomes editable
When I finished editing the comment and click the Save button
Then a confrimation message will appear with the option to confirm or cancel the edit
When I click confirm,
Then the comment will be updated and the page will refresh

As an admin, I want to be able to delete reported post so that unhelpful or agressive post so that the authenticity of the ratings can be preserved.

Given that when I am logged in as an admin
When I click the page that contains all the reported comments/ratings
Then I would be able to see the comments about the report
When I click delete
Then a message will popup confirming whether I want to delete the post or not

When I click yes/no,
Then the post will be deleted or not deleted base on the previous confirmation response

-update: admin has power to delete the incorrect/unfit comments of the professors
